

Stephan Suárez Pérez

Software Engineer · Backend / Full-Stack · Applied AI

Bogotá, Colombia (UTC-5) · stph4211@gmail.com · +57 322 224 9396 · linkedin.com/in/stephan-suarez-38586b266 · github.com/StephanSuarez

PROFESSIONAL SUMMARY

Systems Engineer with experience in backend and full-stack development for e-commerce, focused on maintainable services, reliable integrations and production-grade applications. Strong experience with Kotlin, React/Next.js, Python, relational databases, messaging, AWS deployments and AI features in product (content generation, RAG chatbots and automated evaluation). Involved across the whole development cycle: requirements, technical design, implementation, deployment, observability and production support.

TECHNICAL SKILLS

Backend: Kotlin, Micronaut, Python, FastAPI, REST APIs, microservices, business logic, Flyway, Hibernate.

Frontend: TypeScript, React, Next.js, Vite; end-to-end feature development.

Applied AI: RAG, LangChain, n8n, Gemini and OpenAI APIs, versioned prompts, LLM-as-judge conversation evaluation; coding agents (Claude Code, Codex) with technical review.

Architecture: SOLID, clean architecture, layered separation, event-driven architecture (SQS, publish/subscribe).

Cloud and DevOps: AWS (EKS, EC2, RDS, S3, ECR, SQS, IAM, load balancers), Docker, GitHub Actions, Git.

Data and messaging: PostgreSQL, Redis, Firebase, Oracle, MariaDB, Kafka, RabbitMQ.

Observability: CloudWatch and Sentry for incident diagnosis and production error tracking.

Integrations: Stripe, Mercado Pago, Confío, Shopify, Dropi, Mastershop, WhatsApp Cloud API.

PROFESSIONAL EXPERIENCE

Fluxi · Software Developer

Oct 2024 – Present · Bogotá, Colombia

Platform that builds AI-generated sales funnels for e-commerce in Latin America.

- **AI funnel generation:** pipeline that produces the complete sales page (copy, images, sections and checkout) asynchronously over SQS, with new versions per sales angle and AI-assisted editing in the Next.js builder.
- **Order and logistics automation** with Dropi, Mastershop and Shopify: automatic dispatch to the provider, persistent retries, variant mapping and per-country catalogs, over a flow that grew from zero to 25,000+ orders per month (300,000+ per year).
- **Payment providers** Stripe, Confío and Mercado Pago: checkout, payment-confirmation webhooks and subscriptions with upgrade, downgrade and billing.
- **Multi-country operations** (Colombia, Mexico, Chile, Peru, Ecuador, Paraguay, Guatemala): per-country catalogs, per-funnel currency, gateway and provider availability by country, and region normalization for Shopify.
- **AI WhatsApp chatbots:** support assistant with a knowledge base (RAG) and automated LLM-as-judge evaluation of every conversation; and a multi-tenant service for merchants (Python/FastAPI) with templates, per-reply billing and human-help alerts, in production on accounts handling 400 to 700 messages a day.
- **Account and billing:** credit history, store-creation billing and a realtime notification center (Firebase).
- **Production operations:** incident diagnosis with CloudWatch, Sentry and database queries; AWS deployments and operations with EKS, ECR, RDS, S3, SQS, Lambda, IAM and load balancers, plus Redis, Kafka and messaging queues; maintainability and traceability improvements.
- **Agent-driven development** end to end: analysis, implementation, automated PR review, browser end-to-end testing and deployment, with reusable skills for the team (review, production diagnosis, ticket refinement).

Scientia Labs SAS · Junior Developer

Jun 2023 – Jun 2024 · Fusagasugá, Colombia

- Built backend APIs per microservice applying SOLID, clean architecture and layered separation.
- Event-driven architecture with publish/subscribe and messaging services for real-time interaction between users.
- Agile teamwork and collaborative development with Git: feature branches, pull requests and code review.

Universidad de Cundinamarca · Student Assistant

Jun 2022 – Jun 2023 · Fusagasugá, Colombia

- Organization, cleansing and analysis of databases (Oracle, MariaDB, Excel) and Power BI reports and dashboards for academic decisions.

EDUCATION

B.Sc. Systems and Computer Engineering · Universidad de Cundinamarca · Aug 2019 – Sep 2024 · Fusagasugá, Colombia.

Coursework in software development, artificial intelligence, cloud infrastructure and information security. RedFusaLibre research group (connectivity in remote areas, networks and internet governance).

Languages: Spanish (native); English (professional working proficiency, technical interviews).
